

PROBLEM STATEMENT 59- COMMUNITY LOST AND FOUND NETWORK

SRN: PES1UG24CS925

NAME: PRATHIKSHA B P

SECTION : I

LAB 1

USE CASE FLOW :

Goal	Claim item
Actor	Owner- the one whos claiming
Preconditions	• A matching Found Item post exists for the claimant's Lost Item report • The claimant is logged in and has an active Lost Item report on the platform. • The Finder has set at least one private proof-of-ownership question on the Found Item post.
Post conditions	• Success: Claimant is verified, and the finder's contact details are revealed to the claimant; both listings are marked "resolved." • Failure: Claim is rejected; contact details remain hidden and both listings stay active.
Main flow	1. Claimant selects "Claim Item" on a suggested match shown under View Matched Items. 2. System invokes Verify Ownership («include») and displays the finder's private security questions. 3. Claimant submits answers to the security question. 4. System checks the submitted answers against the finder's stored answers. 5. Answers match; the system marks the claimant as verified owner. 6. System reveals the finder's contact details to the verified claimant. 7. System notifies the finder that a verified claim has been made. 8. Both the Lost Item report and Found Item post are marked "resolved." Use case ends successfully.
Alternate flow	Verification Failed: • System displays an"answers did not match" message and does not reveal contact details. • Claimant is prompted to re-attempt the security question(s). • If verification fails 3 times, the claim attempt is closed, the match is flagged for Community Admin review («extend» Flag Suspicious Match), and the claimant is notified to contact support.
